

Gibbs Core Growth Portfolio

Q2 2026

PORTFOLIO HIGHLIGHTS

Benchmark: S&P 500® Index

Range of holdings: 20-30

Capitalization range:
Predominately Large Cap

Team assets: \$11.1B

Inception Date: January 1, 2019

OBJECTIVE

The Gibbs Core Growth portfolio seeks to provide long-term returns through a balanced approach to growth.

INVESTMENT PHILOSOPHY

The team combines a multi-step top-down approach with bottom-up stock selection to deliver a diversified, large cap, growth-oriented equity portfolio solution. Emphasis is placed on the combination of stocks complementing each other toward the overall goals of the portfolio in terms of risk, income, and growth. Team criteria used to identify investment opportunities:

EARNINGS GROWTH

- Seek companies that can sustainably grow earnings faster than the overall market
- Focus on leaders in their respective industries
- Seek out thematic momentum (structural and/or cyclical)
- Earnings growth greater than inflation

BALANCED APPROACH

- Seeks to provide higher returns (without adherence to style box allocation) by providing a balanced approach to growth for long-term capital appreciation
- Large-cap bias with the ability to move down the capitalization scale as needed
- Portfolio weightings historically have been tightly correlated to the S&P 500
- Diversification benefits over a full market cycle through a blend of growth and value
- Stock price below estimated intrinsic value

INVESTMENT STRATEGY

- The Gibbs Core Growth portfolio combines a multi-step top-down approach with bottom-up stock selection to deliver a diversified, large cap, growth-oriented equity portfolio solution.
- Find companies that can sustainably grow faster than the overall market.
- We seek to provide long-term returns through a balanced approach to growth
- Diversification is also a key component to our portfolio management process, as we select companies across sectors that can collectively achieve the overall goals of the portfolio in terms of risk, income, and growth.

PERFORMANCE (%) (as of Q2 2026)

	QTD	YTD	1 Year	3 Year	5 Year	Since Incep. (01.01.2019)
Core Growth (Gross)	22.59	14.80	21.70	17.36	10.44	17.29
Core Growth (Max Net)*	21.84	13.19	18.24	14.00	7.23	13.81
S&P 500® Index	15.20	10.21	22.33	20.61	13.41	17.57

CALENDAR RETURNS (%)	2025	2024	2023	2022	2021	2020	2019
Core Growth (Gross)	11.07	15.65	22.14	-19.76	35.66	19.83	35.26
Core Growth (Max Net)*	7.85	12.34	18.69	-22.28	31.93	16.39	31.53
S&P 500® Index	17.88	25.05	26.29	-18.11	28.71	18.40	31.49

*The max net return does not reflect the average fee paid by investors in the strategy. It is an industry requirement to show the maximum fee of 3% allowed per regulation.

LONG-TERM EPS GROWTH* (as of Q2 2026)

*Long-term growth is the estimated growth in earnings for the next five years.

The performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that an investor's portfolio, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance information quoted. To obtain current month-end performance information, please call your Raymond James Investment Management sales representative.

Gibbs Capital Management, a division of Eagle Asset Management (Eagle) a wholly owned subsidiary of Raymond James Investment Management.

The information provided above should not be construed as a recommendation to buy, sell or hold any particular security. The data is shown for informational purposes only and is not indicative of future portfolio characteristics or returns. Portfolio holdings are not stagnant and may change over time without prior notice. Past performance does not guarantee future results. Please note that the holdings identified do not represent all of the securities purchased, sold or recommended for the composite. They are provided for informational purposes only.

It is important to review the investment objectives, risk tolerance, tax objectives and liquidity needs before choosing an investment style or manager. All investments carry a certain degree of risk, including loss. There is no assurance that any strategy will be successful, and no one particular investment style or manager is suitable for all types of investors. Indices are not available for direct investment. Any investor who attempts to mimic the performance of an index would incur fees and expenses which would reduce returns. Asset allocation and diversification does not ensure a profit or protect against a loss.

Core Growth Portfolio investing is based on selecting companies with sustainable earnings growth above the S&P 500. There is a risk the companies may fail to meet that expectation and their stock price may decline. Moreover, as with all equity investing, there is the risk that an unexpected change in the market or within the company itself may have an adverse effect on its stock. Investing in growth-oriented stocks involves potentially higher volatility and risk than investing in income-generating stocks.

All performance data is shown on a time-weighted and size-weighted basis and is shown before (gross) and after (net) the deduction of management fees, custodial fees and miscellaneous charges to client accounts; all performance is shown after transaction costs. The net returns reflect the application of the highest wrap fee of 3% annum. Calculations include reinvestment of all income and gains. Performance figures include all internal, retail Equity Income accounts of Eagle Asset Management, a St. Petersburg, Florida-based firm. A client's return will be reduced by the advisory fees. Eagle's fees are set forth in Eagle's Form ADV, Part II. Over a period of five years, an advisory fee of 1% could reduce the total value of a client's portfolio by 5% or more. Investing in equities may result in a loss of capital. Current performance may be lower or higher than the performance information quoted. To obtain current month-end performance, please call your financial professional.

Eagle Asset Management, Inc., has received a firm-wide verification for the periods January 1, 1982, through December 31, 2024. Performance data for 2025 may be revised, and Eagle will publish any revised performance data. Eagle believes that the performance shown is reasonably representative of its management style and is sufficiently relevant for consideration by a potential or existing client. Figures are dependent on date of retrieval. Certain data may change as the source revises inputs. To obtain a GIPS-compliant performance presentation, please call 1.800.237.3101.

The **S&P 500** is an unmanaged index of 500 widely held stocks that is generally considered representative of the U.S. stock market. It is a capitalization-weighted index, calculated on a total return basis with dividends reinvested.

Modern Portfolio Theory Statistics: **Alpha** is a measure of the difference between a manager's actual returns and its expected performance, given its level of risk as measured by Beta. **Beta** is a measure of how a portfolio varies with respect to the benchmark. A beta greater than 1 is more volatile than the benchmark, while a beta below 1 is less volatile. **Correlation (r2)** reflects the percentage of the change in a portfolio's performance that can be explained by changes in the benchmark performance. A measure of the reliability of index-based statistics, correlation can range from 0 (no relationship between movement in the index and movement in the portfolio) to 1 (perfect correlation), with 0.65 being considered by Raymond James Consulting Services to be statistically significant. The **Sharpe Ratio** is a measure of risk-adjusted returns and is calculated by subtracting the risk-free rate (90-day Treasuries) from portfolio returns and dividing the result by the portfolio's standard deviation to represent the incremental unit of return for each unit of risk taken. The Sharpe Ratio is positively affected by higher returns and lower volatility, while negative results are not meaningful and are denoted by NM. **Information Ratio** (alpha divided by active risk) is a measure of excess return over a specific benchmark per unit of risk assumed in excess of the benchmark. This risk measure helps determine the degree to which the "bets" taken within the portfolio are paying off. **Active Risk** is the portion of the total risk/volatility of a portfolio that is unique to the portfolio itself and not related to the overall market. It represents the incremental volatility of an actively managed portfolio caused by stock and sector weightings different from the benchmark.

Portfolio Characteristics: **Yield:** The individual income yield is calculated for each account in the composite (income received over the quarter / accounts average value). Those yields are then summed and divided by the number of accounts in the composite. This is not representative of a yield realized by any client and is not intended to project the income that a client should expect. **Trailing P/E:** Current share price divided by the most recent four quarters earnings per share. **Forward P/E – Price to Earnings:** ratio of the next four quarters – the current price divided by the estimated future earnings. If the next four quarter's earnings are all in the same fiscal year, the annual figure is used instead. **P/B – Price to Book:** share price divided by most the company book value (liquidation value). **P/S – Price to Sales:** share price divided by sales per share. **P/CF – Price to Cash Flow:** share price divided by cash flow per share. **PE/G – Price-to-Earnings over Growth:** forward P/E divided by the LT Growth Rate. **ROE – Return on Equity:** net income divided by common equity; indicates the return on common stockholders' investment. **LT Gr. Rate – Long Term Growth:** the estimated growth in earnings for the next five years. **LT Debt/Capital:** measures the ratio of long-term liabilities to the total capitalization of the company. **Active Share:** Represents the fraction of portfolio holdings that differ from the benchmark index, thus emphasizing stock selection.

Standard Deviation: is a measure of volatility, commonly viewed as risk. Regarding quarterly returns, it is the square root of the variance, which equals the expected value of the squared deviation from the mean value. **Turnover:** is an estimate of the manager's level of trading activity. It is an average of purchases and sales divided by average assets, presented as a long-term annual average.
